Steps for installing App-Shell:-

- Go to C:\Users\{Username folder} and there will be an .npmrc file in it.
- Replace the given code with the existing one:-

    //npm.pkg.github.com/:_authToken=ghp_XDz3ZllOwcGuVIw6JXalfNtT3ikGJe1TQNA5
    registry=https://registry.npmjs.org/
    @bh-ent-tech:registry=https://npm.pkg.github.com/

    Replace _authToken with your authtoken which will be already present in the .npmrc

- Now clone the app-shell project in any folder but not on the desktop.
  git clone https://github.com/bh-ent-tech/app-shell.git
- Now open the folder in VS code and open the terminal.
- Delete the package-lock.json file.
- Go into package.json folder and remove line which consists of `"@bh-ent-tech/bh-obfuscation-adapter"`
- Go to the terminal and do
    - npm install
    - npm run my-command
- App-shell will be running on port 8000
  Username:- FuncUser01
  Password:- P@55word
